Primary Surgery: Trauma

Synopsis

The result of ten years' detailed research, this is a complete and detailed system of trauma methods which the non-specialist general duty doctor can use to treat all human injuries that might benefit from his care. It is designed mainly for medical schools and hospitals in the developing world, but any doctor who is not a trauma specialist will find it useful. A valuable feature is a system of closed methods for all fractures which can be treated this way, and there is an extensive chapter on the treatment of burns. The book is published in collaboration with the Deutsche Gesellschaft für Technische Zusammenarbeit and the Kenyan Ministry of Health, and is part of a complete series on surgery, anaesthesia and obstetrics for hospitals in the developing world.

Customer Reviews

This is an excellent text on how to do actual trauma surgery. I would highly recommend it to any medical professional who is either going into surgery or might be assisting in surgery or anyone doing medical missions in the developing world and disaster areas. This is an easy to read bare-bones guide to walk the reader through the actual trauma surgical procedures in a very comprehensive format.

This is an excellent handbook, for an experienced as well as less experienced (I think) surgeon who is taking care of general surgery in a District Hospital in a remote area Alexander

SchultzMD Specialist in general surgery and urology. Mutomo District Hospital Kenya

I had actually ordered the first volume that these guys sent me the second. I don't mind cause I had planned to eventually get the first, but was disappointed as I'm leaving for a surgical mission but now have the wrong book in preparation.

Excellent Book ! Highly Recommended !

good
