## Customer Reviews

The Lyme Diet was written by Dr. Nicola McFadzean, a Naturopath who has significant experience treating patients for Lyme Disease and related co-infections. While the book is focused specifically on nutrition as it applies to treatment for Lyme Disease, it is easily the most approachable and usable book on nutrition in general that I have ever read. I consider myself "remedial" when it comes to nutrition, cooking, diet, etc., but after reading this book, I feel that I have a firm grasp on the basics, and have successfully used the information provided to stick to a highly "clean" organic and nutritious diet as an integral part of my treatment. I would heartily recommend this book to anyone who is interested in understanding and implementing good nutrition as part of their Lyme treatment. Dr. McFadzean's "real-life" experience with, and compassion for, the challenges facing Lyme patients is obvious in her writing. In the first chapter she addresses the problem of "Lyme brain" and acknowledges the difficulty of navigating significant changes to diet for patients already overwhelmed by the chronic pain, fatigue and brain fog that are common with the disease. She stresses the importance of nutrition in the Lyme treatment regimen, asserting that it is one of the most important factors in any Lyme treatment regimen, but approaches the subject with the assumption that it may be a difficult and gradual change for most people, and that learning to follow the diet will be a process, probably not perfectly executed. Using this approach, Dr. McFadzean has succeeded masterfully in writing a book that makes understanding and implementing the necessary changes as simple and approachable as possible.

Based on the other reviews, I was expecting more from this book. There is some good information in the pages, but there are a lot of problems with the book as a whole. First, the structure is pretty bad - it just seems incredibly disorganized. The first section talks about ask the benefits of the Lyme diet. That's fine except that the diet hasn't actually been introduced yet (that, inexplicably, doesn't come until the second section). Each chapter meanders aimlessly between a few related topics, often repeating sentences nearly verbatim along the way. Second, the tone and pace are frustrating. The text is littered with exclamation points, as if everything being said is some amazing revelation.

Most topics are addressed only superficially before moving into the next. These together make the book read as if it were written by a teenager on a sugar high. Third, and perhaps the biggest sin of this book, is the author's consistent medical claims that have no sources. The whole book contains claims such as GMO foods cause changes in our DNA, artificial sweeteners are neurotoxins, etc., for which the author doesn't provide her sources. There are repeated references to "research", but never specific research or studies, only research in the abstract. After just having read books by Horowitz and Buhner, both of whom cite specific research studies, this book looks like someone's side project. That isn't too say the author is wrong, but I can't take her word on faith when it comes to treating my Lyme disease - I need the proof. Fourth, there are sometimes contradictory pieces of information presented.
